

Tire Carrier Installation Instructions

The tire carrier mounts to the drivers rear door hinges with one mounting point in the door.

Mount the carrier on the outside of the driver's side hinges using the supplied bolts, lock washers and nuts. The bolts are inserted from inside the hinge and the lock washers and nuts are installed on the outside of the carrier mount assembly.

When the carrier is installed on the hinges, you can determine where to drill the hole for mounting to the door. Remove the door interior panel (if equipped) or any custom interior trim. Drill mount hole through door. Using the supplied backing plate and hardware, mount the third leg to the door.
